Google Maps helps facilitate Greenland expedition..

The "Google Maps hacks" continue. The company Guardian Mobility has outfitted two people and a team of dogs who are skiing around Greenland on and exploration of the country with a wireless data unit. Guardian Mobility, says:

She has been outfitted with one of our Tracer units which has a GPS receiver and send data to our backoffice through Globalstars Low-earth orbit satellite network. We're tracking her progress using Google Maps and using MyGMaps. to map multiple points onto Google Map's satellite imagery.

Here's a screen capture of what the information looks like once displayed on a Google Maps map-image:

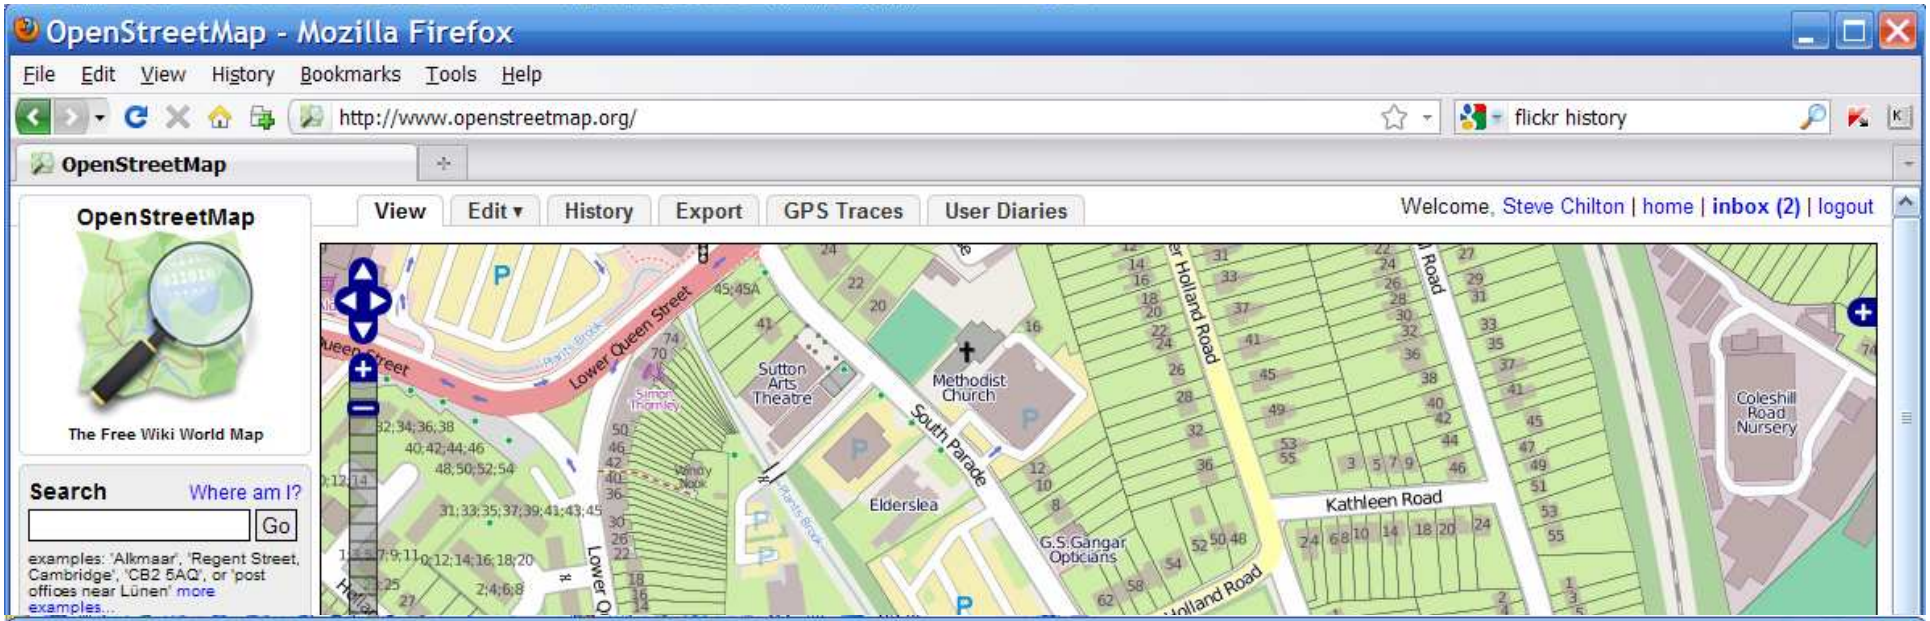

http://googlemapsmania.blogspot.com/2005_04_01_archive.html

..Very cool! If you know of any other sites that are making use of MyGmaps, please post them in the comments section! :)

> separate map *tools* from map *data* so that all the tools can operate on all the data sources. This separation breaks the proprietary silos that earlier GIS revolutions have taught civilization to avoid.

Welcome to OpenStreetMap
OpenStreetMap creates and provides free geographic data such as street maps to anyone who wants them. The project was started because most maps you think of as free actually have legal or technical restrictions on their use, holding back people from using them in creative, productive, or unexpected ways.

Welcome to the OS OpenSpace API

The OS OpenSpace API is free to access and lets developers create amazing web applications and online projects with Ordnance Survey maps.

But OS OpenSpace API is not just for developers.

Although the API uses JavaScript to make web pages more interactive, anyone can create an application by following our sample code and tutorials.

Get Ordnance Survey maps on your website to enhance the service and customer experience.

Example of OS OpenSpace API displaying Ordnance Survey data

step 1
get started and **register now** for your API key

step 2
technical help is available from our **developer** area

step 3
join our **forum** and share your thoughts

Make Your Google Map Stand Out With Styles

Adam DuVander, May 20th, 2010

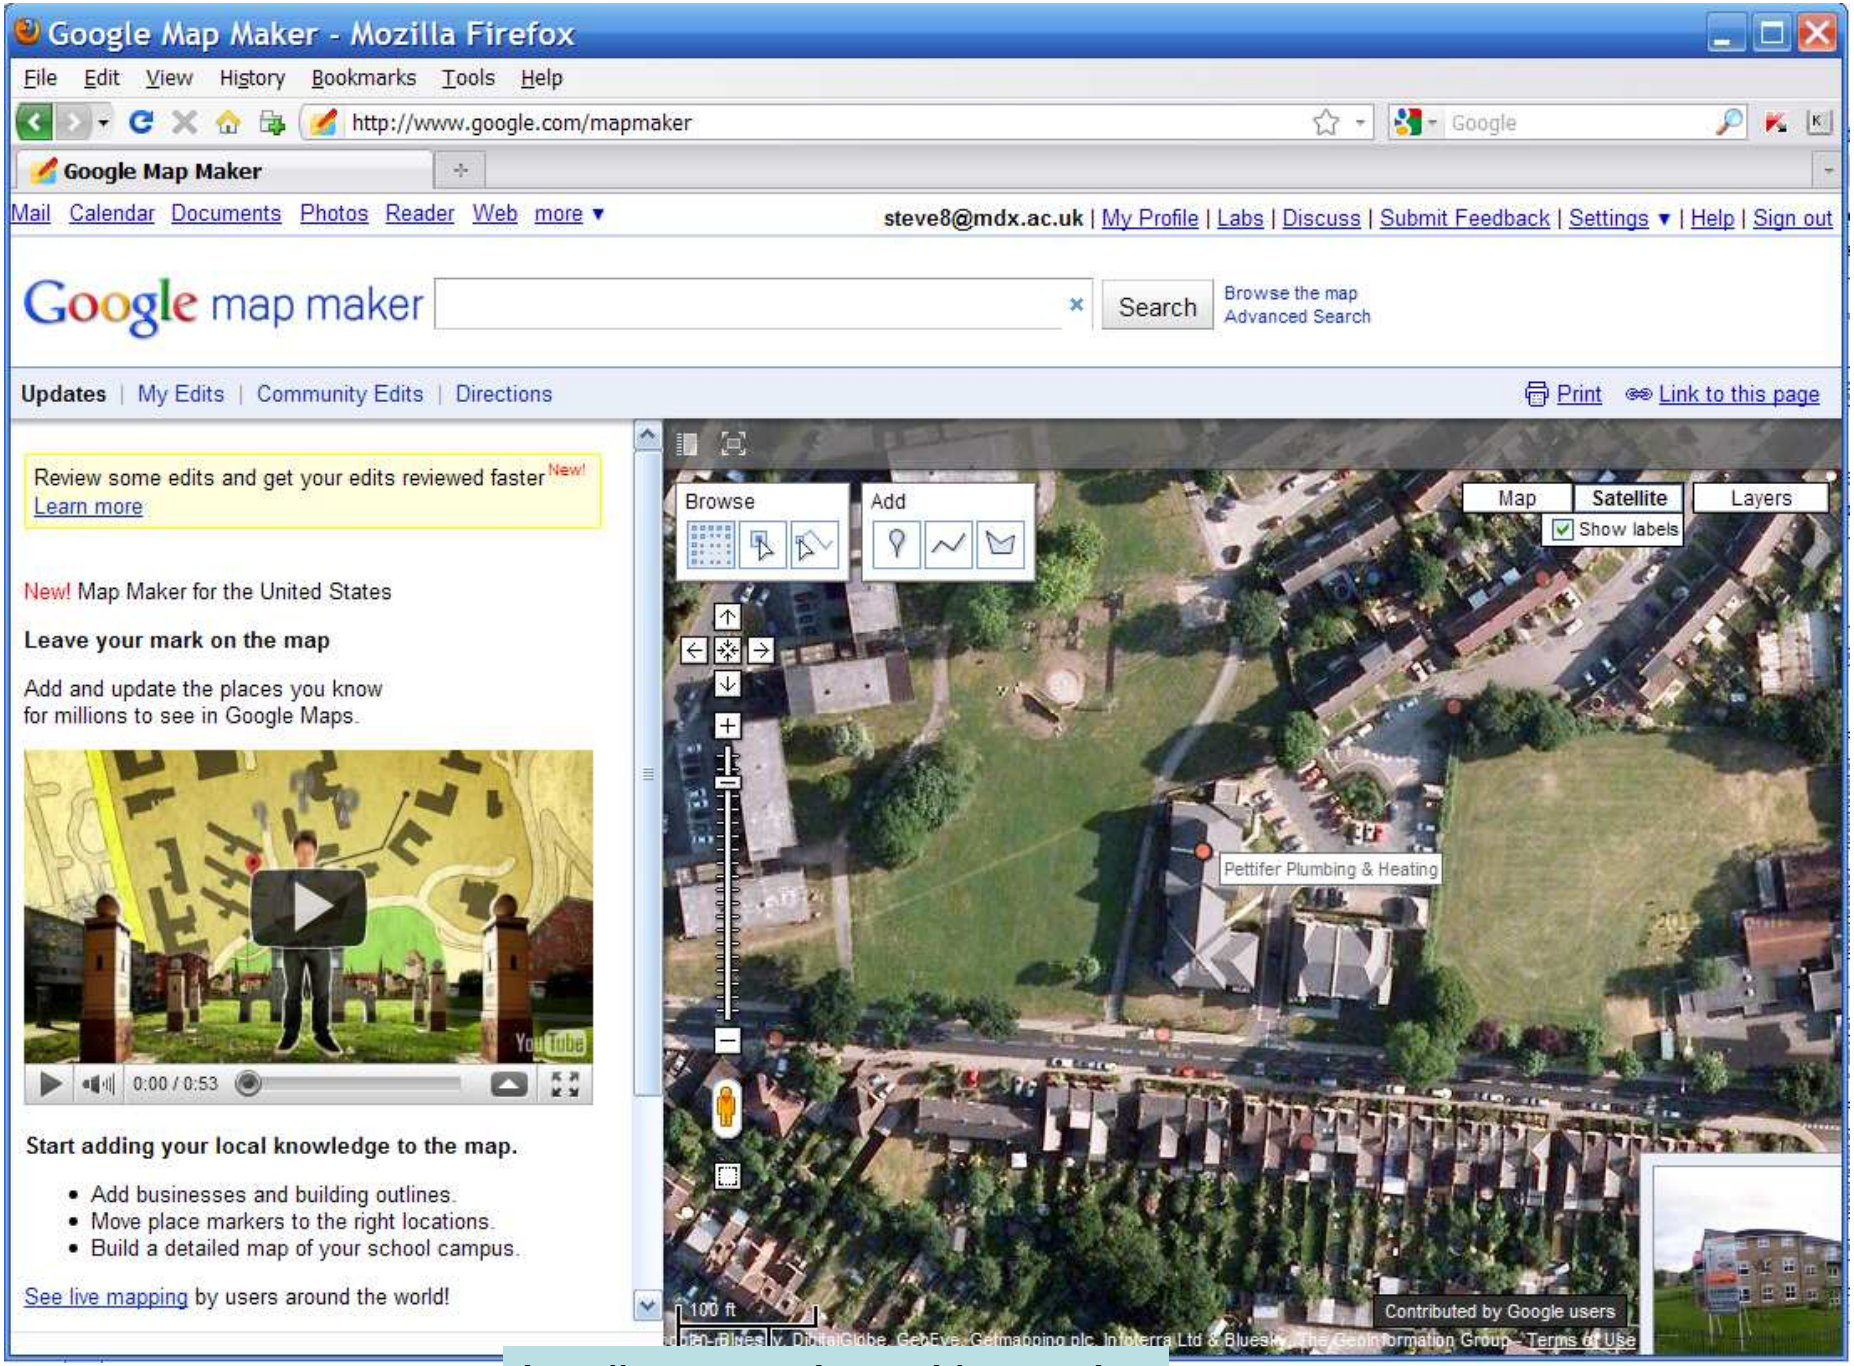

Look out, CloudMade. Google has just announced a new feature
API that lets developers control the underlying map imagery. Map
gives you control of colors and whether types of features are incl
level of map styling was only available by paying for underlying m
Map project that CloudMade is based upon.

Since Google put Maps V3 into production, this new feature is nc
version. The map embedded above makes the map a saturated
interest labels and smaller roads. Click between the "Map" and "E
in lower Manhattan. Google has an example page with eight othe
reminiscent of CloudMade's Midnight Commander.

Magicshop Frontdoor is now live

stevecoast

Viewed **676 times**
Favorited **0 times**

Reposted from **here** A few months ago an experimental service to **automatically find roads and other features in aerial imagery** was launched. Today we're adding to that a service to help improve local search results.
The **frontdoor app** allows anyone on the web to help improve our address location results. The site allows you to drag a pin from where we think an address currently is to the front door of the property. You do this using our aerial imagery. Not every house is easy to see but many are very obvious.

MapQuest Opens Up – in the UK

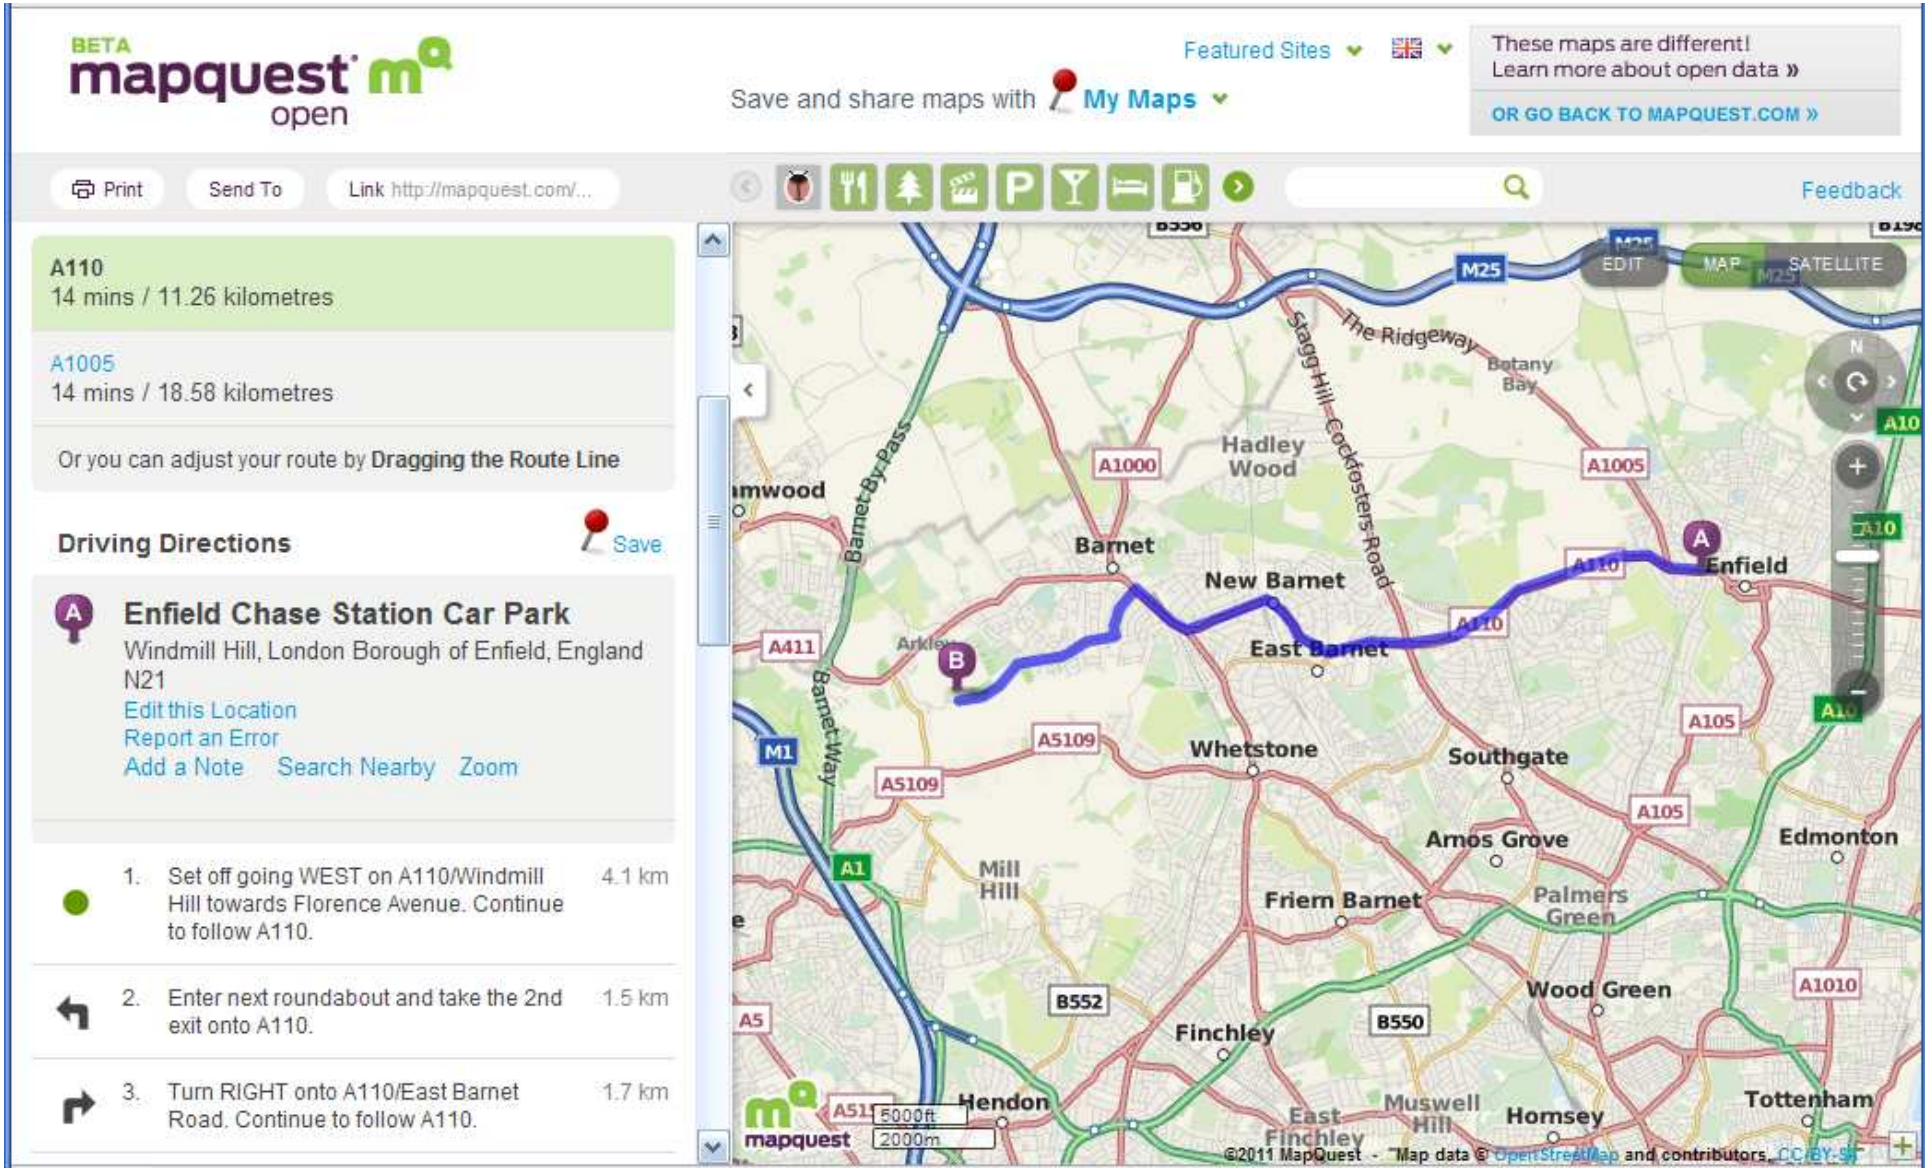

Jul 9, 2010

Ant · Posted in: Events

As I write, we are in the final few days of work left to us on the new Beta site open.mapquest.co.uk. It's an experimental site that uses the free open source OpenStreetMap data, as well as various open source tools, software and utilities to bring it all together. We then added some of our own special sauce – our best-in-class routing algorithms, and our new user interface (a full experience of which can be found at new.mapquest.com).

"We believe that open source is ultimately the future for AOL's local and mapping applications. And we're very excited about supporting OpenStreetMap, which powers the maps behind Patch, our local news and information platform. We believe community generated maps that are of high quality and accuracy will end up ultimately being the better mapping product for users. Allowing users to improve the areas they know and care about like streets in their neighborhood, in addition to hiking trails, parks and bike paths, we believe will lead to the best mapping experience for all users."

Esri Releases ArcGIS Editor for OpenStreetMap

New Tool Helps ArcGIS Users Become Active Contributors to Wiki World Map

July 6, 2010

Redlands, California—Esri has released a new, no-cost add-on for ArcGIS 10 that allows ArcGIS users to contribute data, using the editing capabilities of ArcGIS Desktop, to OpenStreetMap . Volunteered geographic information (VGI), such as that available from OpenStreetMap, is playing an increasingly significant role in emergency response during crises like the oil spill disaster in the Gulf of Mexico. With this new, free and open source tool, ArcGIS Desktop users will be able to more easily contribute to the growing OpenStreetMap community.

The add-on allows ArcGIS users to download data from OpenStreetMap, store it locally in a geodatabase, and use the advanced editing environment of ArcGIS Desktop 10 to create, modify, or delete data. Once the edits are complete, the changes can be posted back to OpenStreetMap and made available to the OpenStreetMap community.

More details about the tool will be released over time, including access to the source code and enhanced documentation.

To download ArcGIS Editor for OpenStreetMap or to provide feedback about the tool, visit the project's Web site at www.esri.com/osm-editor.
