

Introducing OpenStreetBrowser 2.0

by
Stephan Plepelits

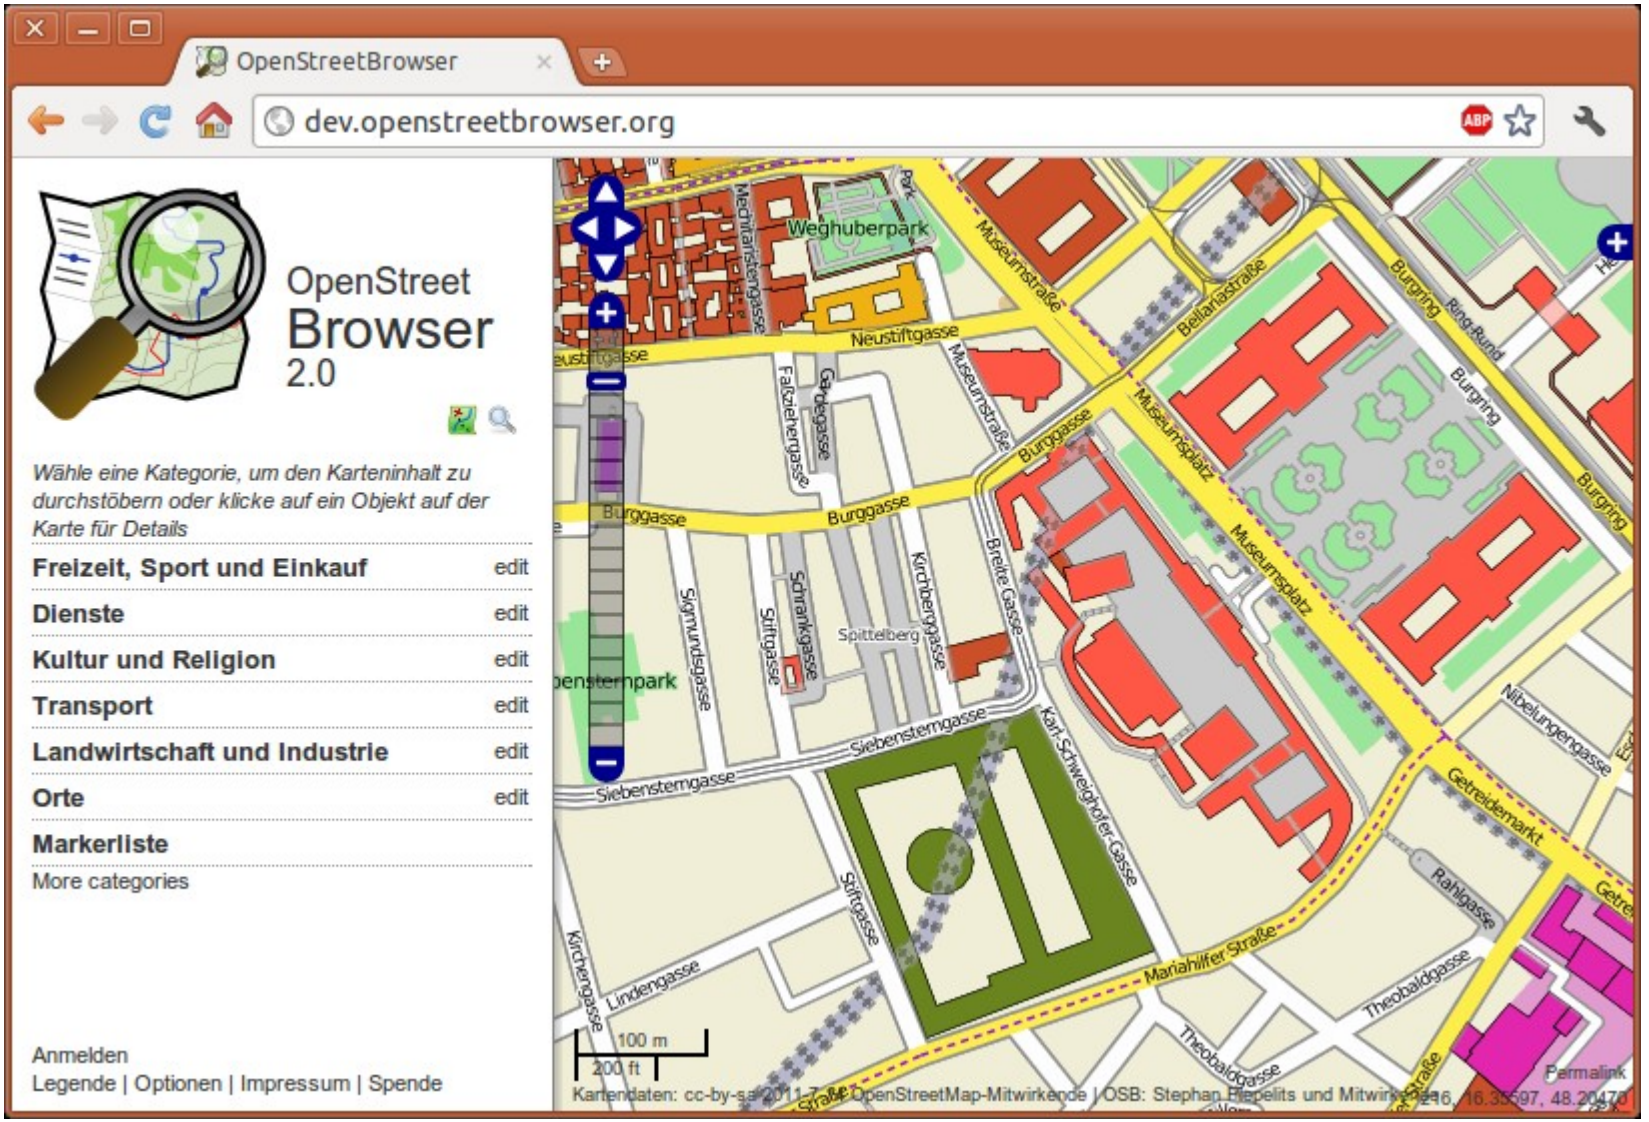

skunk@xover.mud.at

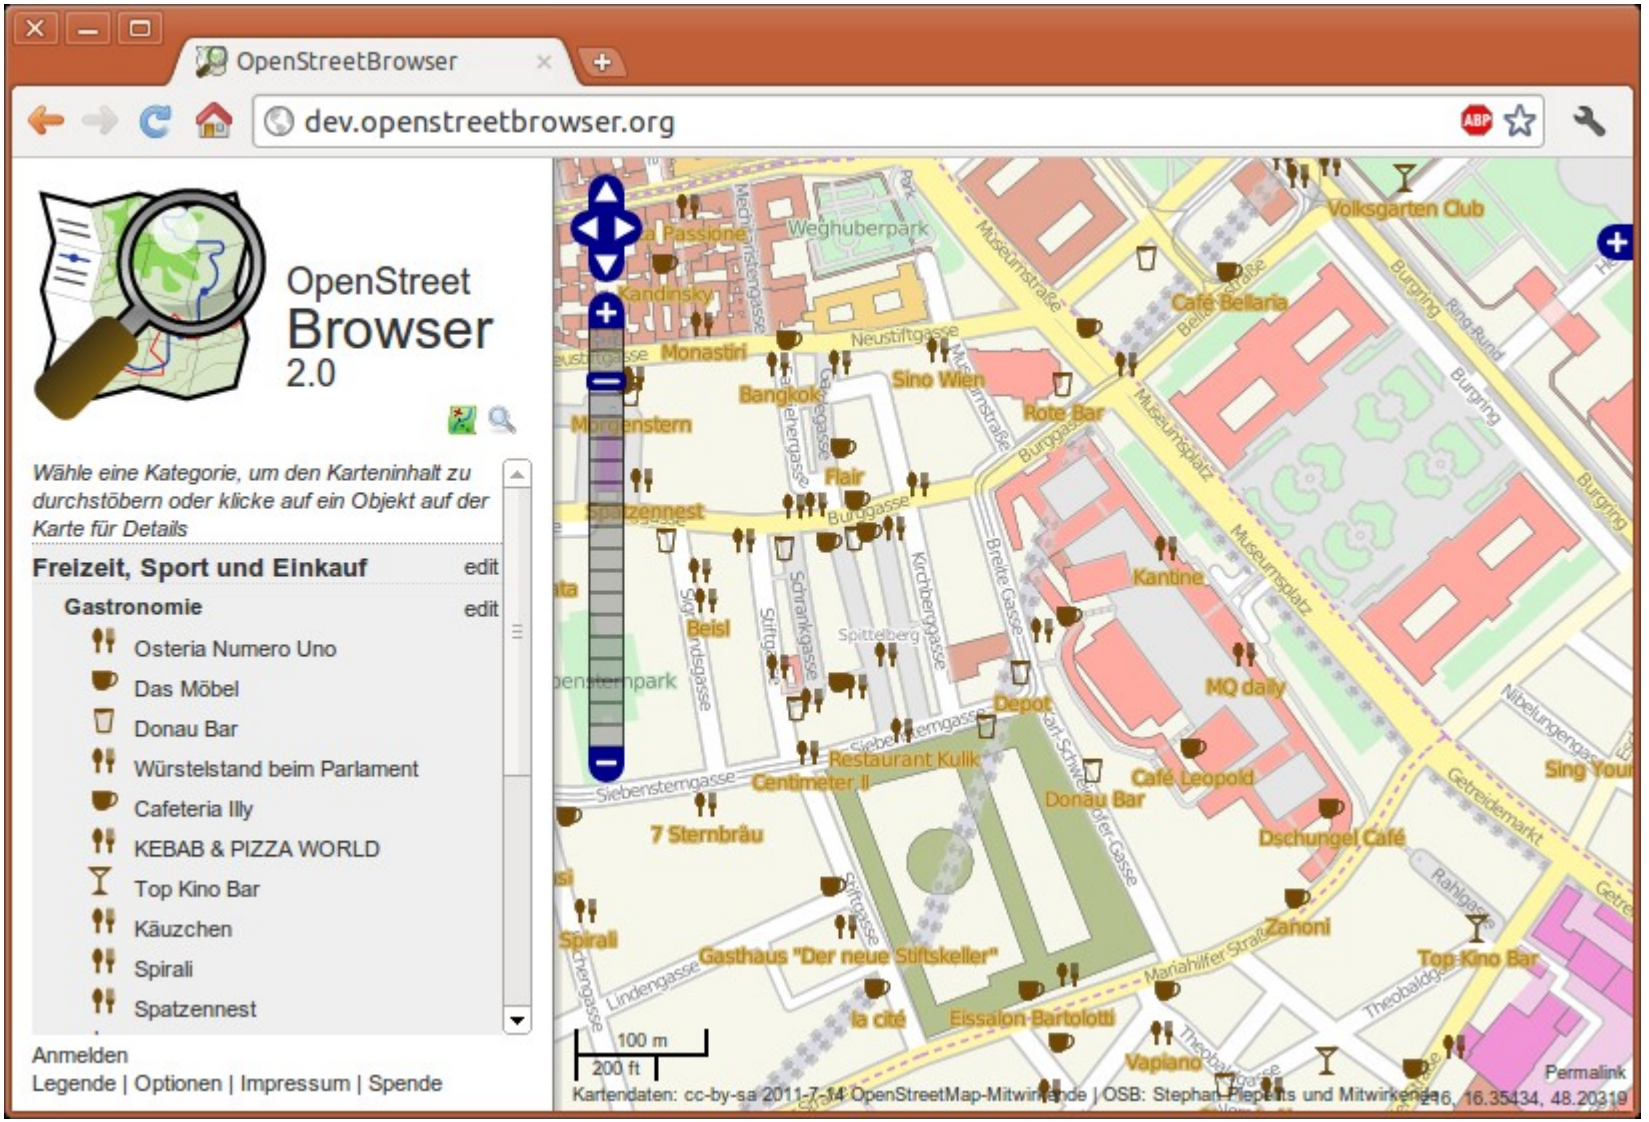

Project Overview

- Started in autumn 2008
- Since spring 2010 working on version 2.0, released Wednesday this week
- Not totally alone: lesewesen (Webdesign), derstefan (code contributions, UX, Networking)
- “Categories” to browse map content
- Some interactivity: place markers, identify map objects, …
- Version 2.0: Updating database, custom categories

Markers

http://www.openstreetbrowser.org/#?mlat=48.20347,48.19709&mlon=16.34482,16.35641

Technical Stuff

- Software:
  - Database: PostgreSQL 9.0 + PostGIS 1.5
  - Rendering: Mapnik 0.7.1, mod_tile, renderd
  - Browser API: OpenLayers 2.9
  - Osmosis 1.5.1 for updating database + stored procedure OsmosisUpdate
- Tables 'osm_point', 'osm_line', 'osm_polygon', 'osm_rel'. Columns:
  - osm_id (string, e.g. 'node_1234')
  - osm_tags (hstore, e.g. 'amenity=>bar, name=>foo')
  - osm_way (geometry)
- 3 Servers:
  - miranda: keeping database up-to-date
  - greg: rendering base and public transport tiles
  - gnomi: main application and category tiles and interaction

Problem: Housenumbers

- Work-around for rotating TextSymbolizers

Problem: Symbolizer Style

- Use database values for symbolizer styles, e.g. color, rotation, width, … everything :)
- Hopefully solved with Mapnik 2.0

```
<LineSymbolizer>
   <CssParameter name="stroke-width">5</CssParameter>
   <CssParameter name="stroke">[color]</CssParameter>
</LineSymbolizer>
```

Example: http://trac.mapnik.org/ticket/359

Problem: Advanced TextSymbolizer

- Idea:

  ↔ 49 ← 2, 13A → 13B

- Problems:
  - Text gets turn-around, when road goes West → disable turning or specify “turn-text” (↔ 49 ← 13B → 2, 13A)
  - Not possible to specify multiple colors

Summary: Mapnik Wishlist

- Database values for Symbolizer Styles
- Rotate (point) TextSymbolizers
- Alternative “Turn-Text”
- Multi-colored TextSymbolizers

Hopefully solved soon?

Outlook

- Version 2.1:
  - Navigation system (based on CloudMade API)
  - Save views/objects/routes/... as favorites
  - Viewer for GPX-files
  - Measure distances and areas on the map
- Ideas for later:
  - Download current object as GPX/KML/Shapefile
  - Download category for an area as GPX/KML/Shapefile
  - “My Maps” - draw things on the map (KML)
  - Layer-Menu, custom external layers

Thanks for your attention!
