twms: T web maps service

Why?

- Needed Y! in JOSM, possibly without browser

How?

- There's sWMS menu!

First version only stitched tiles and gave them to josm.

Needed to use OSM in QGIS =>

follow WMS specs

Image processing

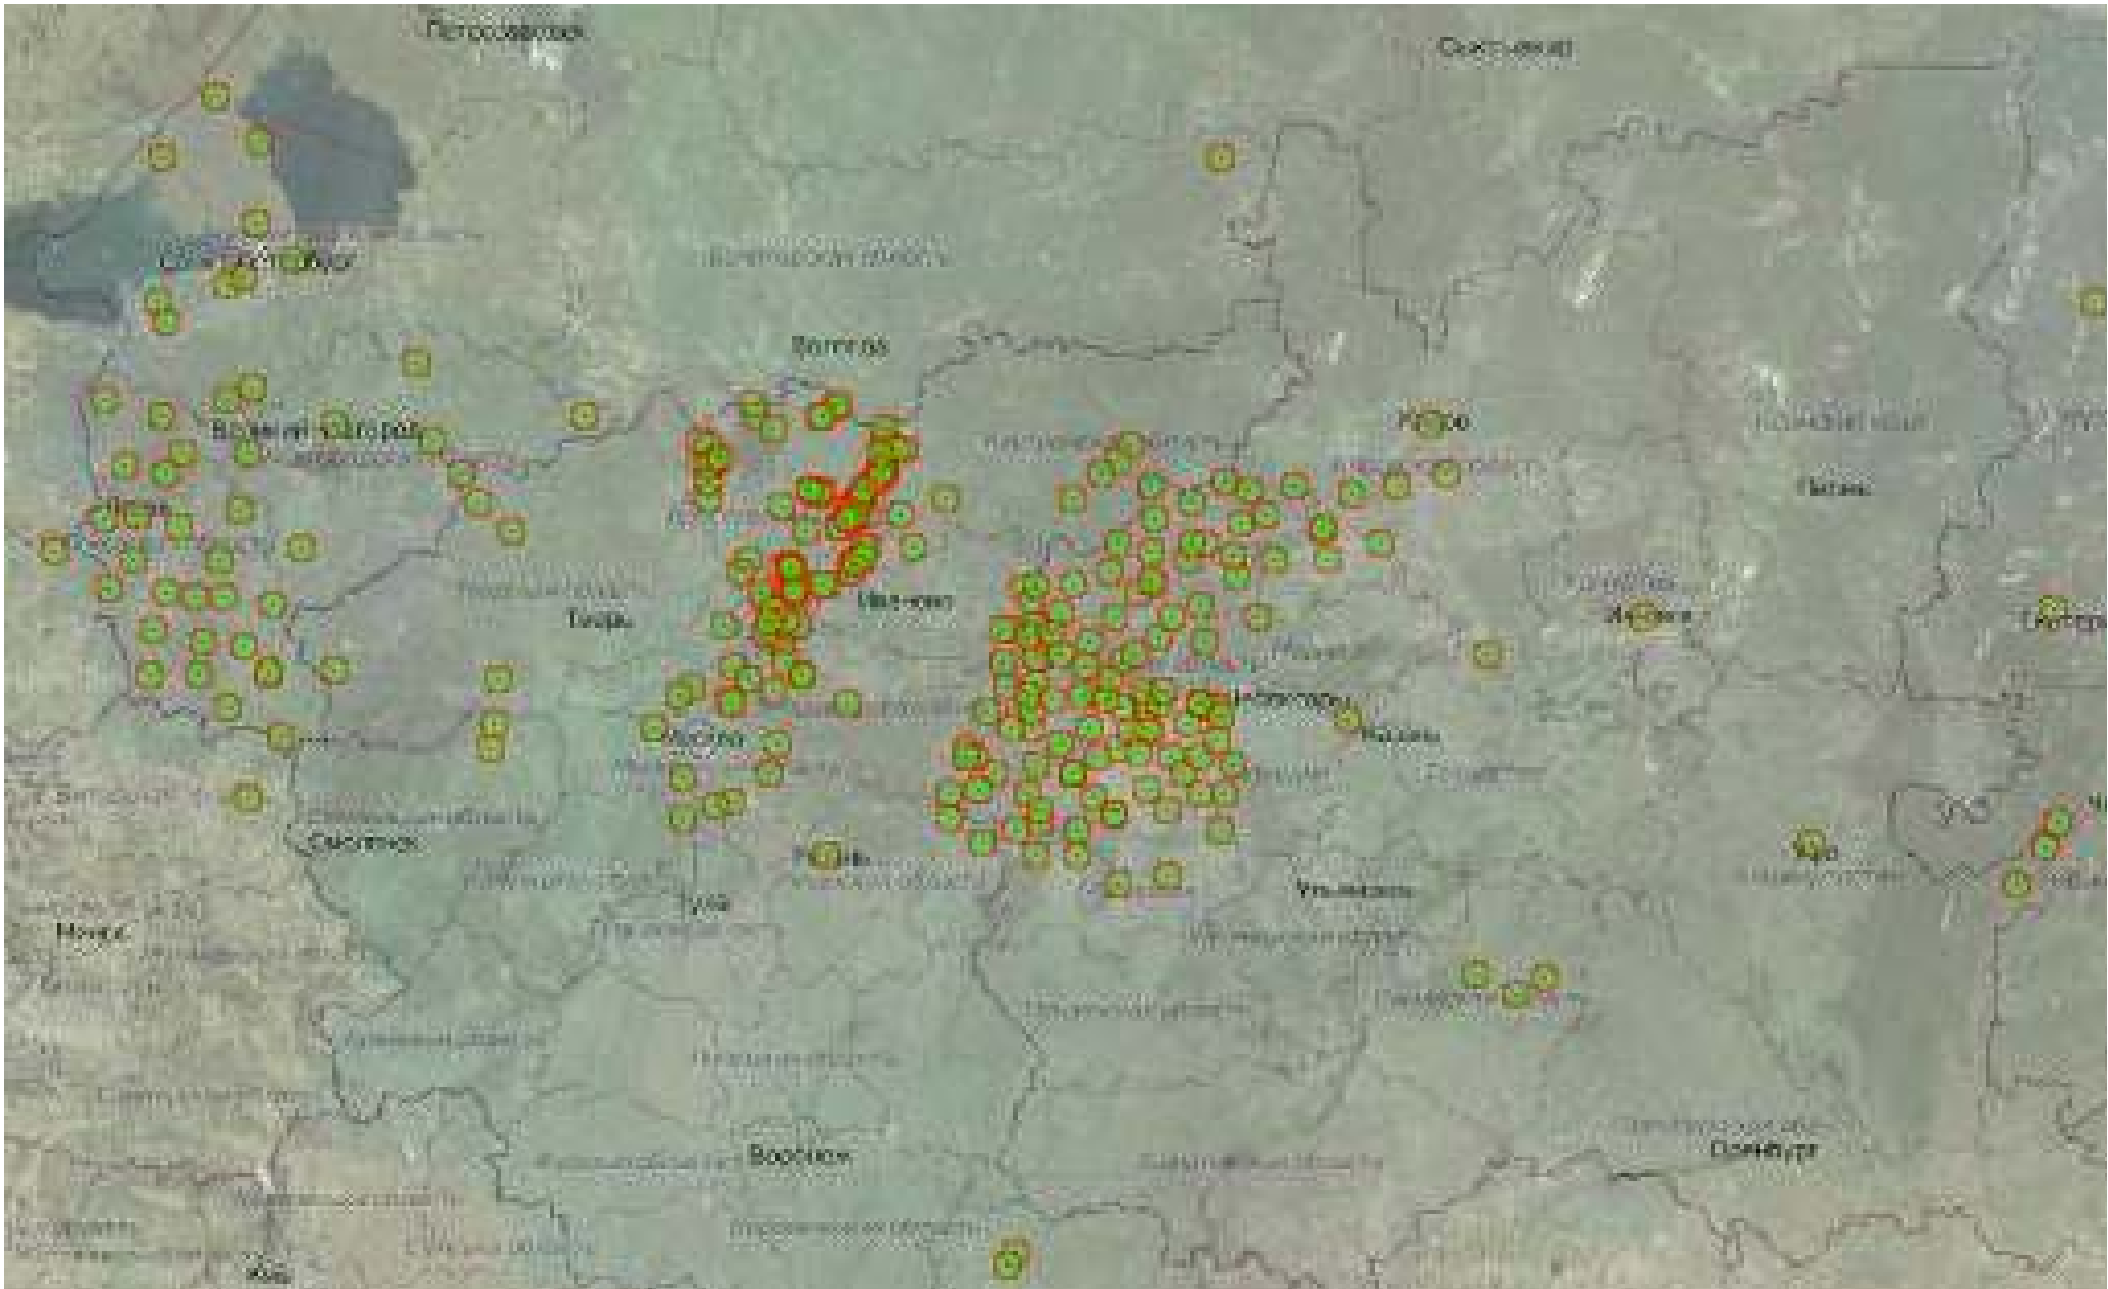

- Data – in JPEG tiles – no transparency :(
- No RAW GEOTIFFS! :(
- Badly aligned sometimes :(
- Badly processed! :(
- ...million of other things!

Filters

A set of on-the-fly filters:

- Bw, contouring, median, blurring, edge-detection, autocontrast...
- Swap channels;
- Fusion;
- Add your own!

On-the-fly realignment

Mosaic and filter non-transparent layers

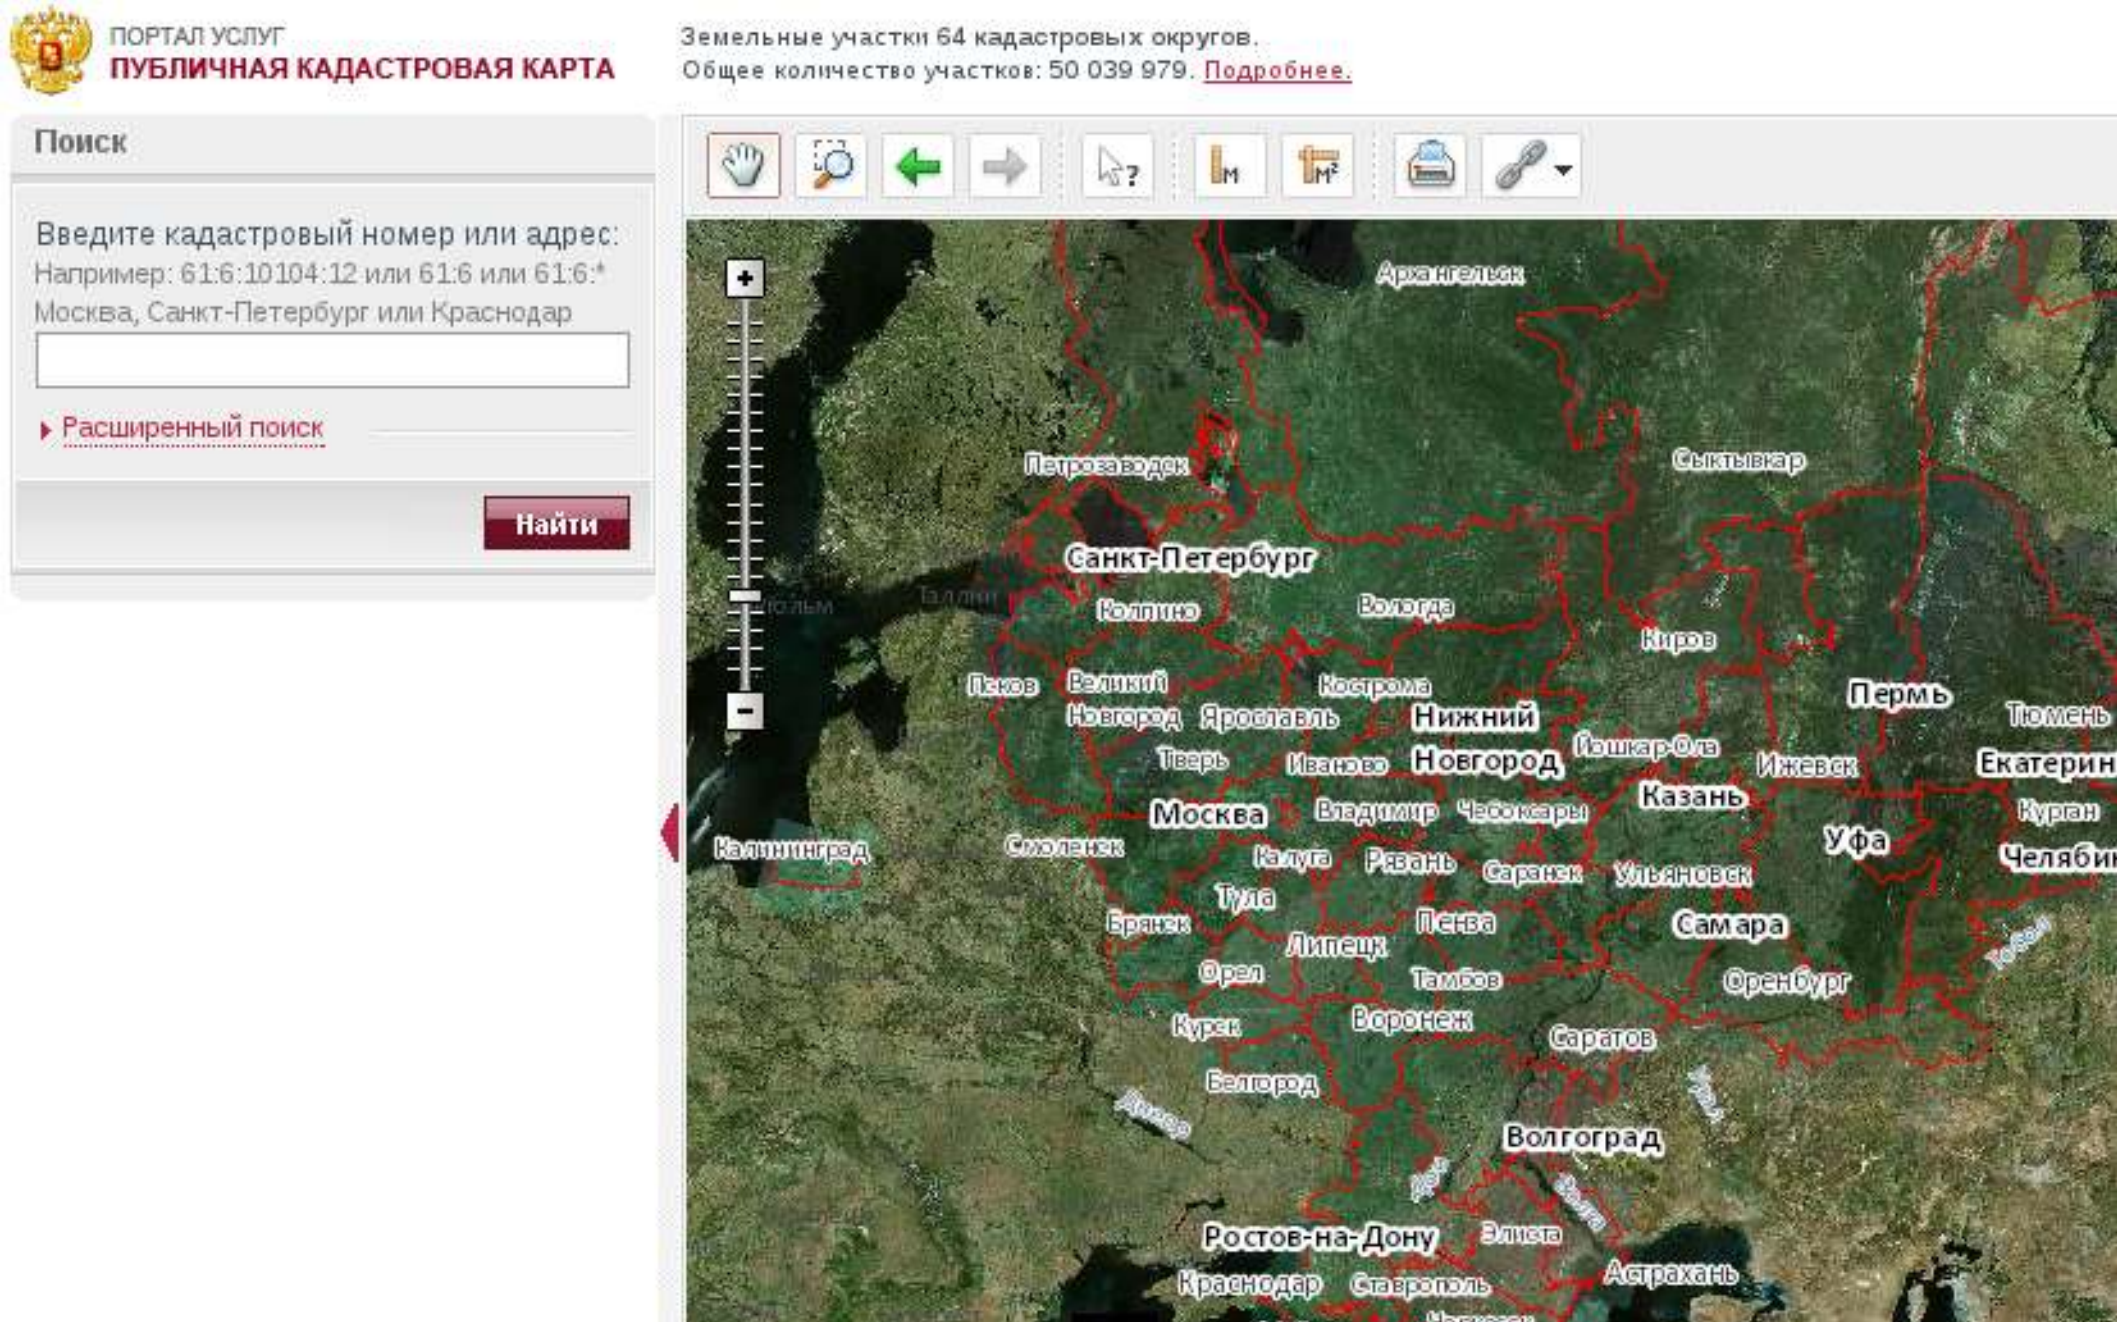

Caching unreliable servers,

including landsat mirror from NASA for OSM

(thanks http://gis-lab.info/ for hardware)

official russian cadastre uses twms

http://code.google.com/p/twms/
